

Boisé® and Micro-oxygenation: The perfect match for your spirits

Optimize the ageing of your spirits, guaranteeing quality and efficiency.

Reduce your costs and simplify your operations, while achieving the desired aromatic impact.

Ensure a consistent profile and guaranteed quality in every production.

Opportunities for the production of your spirits

BENEFITS

Ageing and maturation of spirits: We regularly carry out micro-oxygenation tests to assess the effect on the ageing process of spirits, in time and at the sensory level.

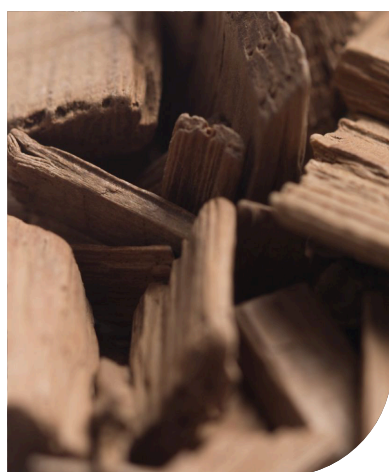

Reduce costs and simplify operations: The use of Boisé® oenological oaks reduces the cost per liter, achieves the desired aromatic impact and simplifies the operation by reducing the number of foudres and/or barrels.

Consistency and repeatability: Our oaks ensure the consistency of the organoleptic profile of each spirit, which in turn leads to greater product repeatability.

Product diversification: Our solution opens up new business opportunities, such as the production of prepared cocktails and ready-to-drink (RTD) beverages, to meet changing market demands.

KEY ELEMENTS OF THE OFFER

A complete solution: The combination of Boisé® and our experience in the use of micro-oxygenation enables us to meet the specific needs of distillers, offering a complete solution to improve quality, reduce costs, increase the value of their products and enhance their competitiveness in the marketplace.

Boisé® France: High-quality oenological oak. Pioneering and avant-garde, Boisé® France develops unique products to meet the expectations of all consumers. Thanks to a wide range of exceptional oak products, you can innovate, design different types of profiles and adapt to market trends.

Micro-oxygenation: A technology that controls the precise release of oxygen during the aging and fermentation process.

VIVELYS

Vivelys is a specialist in precision oenology and premium oak products, and has developed major innovations to help its customers make the right decisions at the right time. Vivelys has created Boisé®, Dyosystem®, Scalya®, Ecolys®, Visio and KitBrett, concrete, relevant and innovative solutions, sources of progress and value, to meet the industry's challenges.
